

Secure SD-WAN

Simplified Networking & Bandwidth Management

Secure SD-WAN provides a single pane of glass for overseeing mission-critical network performance and security controls. Optimize your organization's cloud networking resources and implement real-time policies in just a few clicks with the power of Secure SD-WAN and COEO's fully managed support.

Optimized Networking with Managed Support

COEO is a dedicated technology partner that provides end-to-end protection of your mission-critical networks with our Secure SD-WAN solutions.

Solutions

COEO's Secure SD-WAN simplifies bandwidth and network security management. Our SD-WAN solutions are customized to your business resources and fully managed by our team of experts for enhanced network performance, security, and optimization.

Services

COEO provides hands on services throughout the customer journey. Our expert team conducts a business needs assessment, customizes your SD-WAN solution, and ensures a seamless implementation for enhanced networking and bandwidth performance.

Support

COEO's hands on support ensures your business receives dedicated attention for your Secure SD-WAN solution. We provide a dedicated Client Technology Advisor, 24/7/365, customer and technical support, and regular system maintenance to ensure your ongoing success.

Secure SD-WAN Benefits

- ✓ Simplifies network operations and security for an increasingly digital and cloud-based business landscape with a "single pane of glass" for oversight and management of network bandwidth, traffic, users, devices, and applications.
- ✓ Optimizes voice, traffic, and data flows for unique workflows with comprehensive management controls and a centralized dashboard for users.
- ✓ Unified Threat Management (UTM) combines essential security features like Anti-Virus Software, Intrusion Detection and Response, and Malware Protection to safeguard your network against a wide range of threats.
- ✓ Works in tandem with SASE to protect data from security breaches; SASE authenticates from the outside and Secure SD-WAN regulates from inside the network.
